CMPT 281– Website Design and Development

Assignment T09

Evaluation

Date Due: During Scheduled Tutorial Time

Total Marks: 1

General Instructions

- Assignments must be submitted using Canvas.
- Unlike previous tutorials, this lab work **must be completed during your scheduled lab time** in order to get marks
- You will submit your output from the following exercises as proof of completion, but the TA will grade you during the lab time
- The assignment should be submitted in a single .pdf file (see submission requirements below)

Question 1 (1 point):

A fundamental part of design is evaluation. In previous tutorials you have given peer feedback on wireframe designs, and practiced a Heuristic Analysis on several real-world websites. In this tutorial, you will be giving feedback to each other on your class project (Assignment 3, 4).

Peer Evaluation

- Get into groups of 3-4
- Each student in the group will have approximately 10 minutes to show the current state of their project and elicit feedback from their peers
- Feedback should be constructive and relevant to the topics studied in the course
    - i.e., Contrast, Repetition, Alignment, Proximity; Use of Colour; Usability Heuristics
- You should take notes of what is said about your work, so you can incorporate the suggestions into the design and imlementation of your final submission

What to Hand In

- You must submit a file with the feedback given to your design, particularly ways to improve the design (a photo, txt file, pdf, etc are all acceptable)
- Additionally, the TA will be taking attendance during the tutorial. **You must be present to get marks for this tutorial exercise.**
